

About Dolphin Neurostim

Dolphin Neurostim is the world's first device specifically designed for to reduce sympathetic stress for the reduction of soft tissue pain. Dolphin applies brief, concentrated DC micro-impulses to key neurological points to reduce stress, relax muscles and relieve pain. This natural but potent form of pain relief is now being applied in over 60,000 hospitals and pain clinics world-wide.

"Dolphin is the only therapeutic modality I have ever used where you literally see the tissues change before your eyes after treatment."

Dolphin Neurostim is the world's first device specifically designed for to reduce sympathetic stress for the reduction of soft tissue pain. Dolphin applies brief, concentrated DC micro-impulses to key neurological points to reduce stress, relax muscles and relieve pain. This natural but potent form of pain relief is now being applied in over 60,000 hospitals and pain clinics world-wide.

Dolphin: New "First Response" to Chronic Pain

The Dolphin DC Microcurrent gently whispers at the body's fascia and nervous systems, soliciting a deep, healing response that reverberates throughout the entire body.

The Dolphin's stimulation is thousands of times less in strength than traditional AC TENS devices and is therefore far safer – and far more effective – in the treatment of chronic and acute pain. So effective, Dolphin has been called "microcurrent bio-stimulation" in the marketplace due to its added benefits on cellular physiology and growth.

How Dolphin Therapy Works

Dolphin Neurostim applies low-frequency Microcurrent stimulation to unique combinations of key acupoints to produce an immediate reduction in chronic pain.

Dolphin-MPS protocols instantly reduce stress and naturally release muscles and endorphins to relieve chronic pain through the body. This multi-pronged effect on the body's nervous, muscular and endocrine systems is why the Dolphin-MPS works so quickly and so effectively on many chronic pain conditions where other approaches fail.

This simple and discomfort-free procedure is proven in published science to reduce chronic pain 75% (IJCAM) to 80% (JCAM) after a single session.

Dolphin Neurostim is Easy to Use

Refer to the recommended treatment points illustrated in the accompanying protocol manual - Natural Health. Dolphin is designed to easily detect and each treatment point with absolute scientific precision.

Once a point is located, simply activate and hold the Dolphin for only 20-30 seconds per point. Follow this procedure for every point recommended in the manual.

The end result is a simple, natural and effective solution for the relief of acute and chronic muscular pain, both clinically and at home.

Dolphin Neurostim (MPS Therapy) is Proven Effective for

- Back Pain ([JACIM](#))
- Neck Pain ([JCAM](#))
- Body-wide Pain ([Med Acup](#))
- Post-Surgical Pain ([IJCAM](#))
- Stress reduction ([JDMS](#))
- Stress reduction ([Med Acup](#))
- Improving Massage ([JYPT](#))
