

About Dolphin Vagal Stim

Dolphin Vagal Nerve Stimulation is a exciting new therapy to combat the lingering adverse effects patients are experiencing with chronic Long-Haul symptomology.

Dolphin VNS is a safe procedure that may be administered in a home or clinical setting and may be applied under fifteen minutes (<15 minutes).

*"I have suffered from PTSD since the 2017 Las Vegas Shooting where I witnessed people getting shot and killed. COVID made all this much worse. Now, 90% of my anxiety attacks are gone after Dolphin Vagal Stim".

Vagal Stim Therapy

Vagal Nerve Therapy is the next Health Revolution

Vagal Nerve is 80% of our stress-reducing "brakes"
(Hamilton et al, 2016)

The Vagus Nerve is the 10th cranial nerve and the longest cranial nerve in the human body. It is also the most complex of all nerves, responsible for transmitting information from the gut to the brain, which is linked to dealing with stress, anxiety, and fear-hence the saying, 'gut feeling.'

The Vagus Nerve helps you recover from stressful and scary situations. This information "superhighway" represents eighty (80%) of our Parasympathetic Nervous System (PNS) activation, and is considered the "brakes" of the body.

Stimulating your vagus nerve can 'wake up' the PNS and produce optimal health. Strong vagal tone counters pain, high blood pressure and body-wide inflammation.

Introducing Dolphin Vagal Stim

Dolphin Vagal Nerve Stimulation is a potent new therapy that activates the relaxation and healing responses of our parasympathetic Vagus Nerve, nervous system (PNS).

- Relaxation & stress reduction: Only 5-10 minutes of Dolphin VNS produces the same parasympathetic response as eight (8) one-hour massages!
- Decreasing inflammation: The vagus nerve is our body's only anti-inflammatory mechanism.
- Trigger point activation: Prolonged stress increases muscles tone (tightness) and activates trigger point tenderness.
- Lymph & Circulation: Stress inhibits circulation/lymph. So increasing vagal tone significantly enhances movement of all internal fluids.
- Decreased Pain: Stress exasperates chronic pain. Reducing stress also reduces chronic pain.

Dolphin Vagal Stim Treats COVID-19 Long Haul

Thirty to sixty percent (30%-60%) of COVID patients continue to experience complications a long after their acute illness. These patients are called COVID 'long-haulers'.

Top COVID Long-Haul Symptoms

- Fatigue
- Depression or anxiety
- Shortness of breath
- Chest pain
- Insomnia
- Higher blood pressure,
- Gastrointestinal complaints

Dolphin Vagal Stim was authorized for treating Covid ARDS and Covid Long Haul during the Covid-19 pandemic.

"I am amazed as this Vagal Stim treatment has given me back some of the "normal" that I has lost due to COVID.
Joan M.
